# Kaia Legal eDiscovery

GOVERNED, SELF-IMPROVING VERTICAL AI FOR REGULATED WORK

## Every document classified with its reason. Every privilege call made by an attorney.

Kaia Legal runs the nine-stage eDiscovery lifecycle, from information governance through production and presentation. It reads every document, classifies it Hot, Warm, Cold or Privileged with a confidence score and written reasoning, and routes anything uncertain or privileged to an attorney. Every correction your reviewers make is recorded, measured and applied, inside your own tenant.

### WHAT YOU LIVE WITH TODAY

Review cost scales with page count. First-pass review is bought by the hour or the seat, privilege calls sit in a queue nobody can see into, and the vendor's accuracy is whatever the vendor says it is. When the production goes out, the record of who decided what, and why, is scattered across tools.

**With Kaia:** one governed run, hold to production. The highest-risk documents reach an attorney first, with the reason on the card. Nothing privileged leaves without a person. Every classification, review decision and correction is logged with its timestamp and reasoning, ready for the court and for the client.

### WHAT KAIA LEGAL DOES

1. **Intake and preservation.** Identification, legal hold and defensible collection with a forensic chain of custody. CURRENT
2. **Processing.** Extraction, deduplication, de-NISTing, language detection and normalisation; obvious non-responsive material culled. CURRENT
3. **Review.** Four categories, one confidence score, full reasoning. Below 0.90 confidence a human review is mandatory; privileged documents always go to the attorney queue. CURRENT
4. **Analysis.** Entities, timelines, communication threads and privilege clustering for case strategy. CURRENT
5. **Production and presentation.** Relativity load file, Concordance DAT, EDRM XML; a court-ready privilege log; redaction and Bates numbering; exhibits and trial-prep materials. CURRENT

Kaia prepares, routes and assembles the evidence. Authorised people keep the final call on every production.

### BUILT FOR EACH SEAT

**Partner:** case strategy, cost and review completion across matters; escalations to approve. **Associate:** a confidence-ranked queue with the highest-risk documents first. **Paralegal and lit support:** batch throughput and SLA. **eDiscovery manager:** the full audit trail from collection to production. CURRENT

### HOW IT IS CONFIGURED FOR YOU

Your coding conventions, custodians and data sources (M365, Google Vault, Slack, Box, endpoints), your review protocol and production formats, set with you at onboarding, never a fork. CONFIGURATION

### WHY KAIA

**Priced on the work:** per document or per gigabyte ingested, never per reviewer seat. **Court-admissible confidence:** designed against the Daubert standard, with the methodology, the frozen evaluation sets and the per-release measurements shipped as the record. **Where do your data and context live today, and two years from now?** With Kaia they stay in your tenant and compound for you; your corrections never train another firm's model. **Its own measurement is public: 95.7%** privilege accuracy on 810 held-out documents, measured against the serving model on a frozen evaluation set, release over release. Hold every vendor to the same record. kaiaai.ai/legal

### THE FOUNDING-PARTNER PATH

**Diagnostic, two weeks.** A sample of documents from a closed matter, with the calls your reviewers made; a written result with its method. Fully credited. FOUNDING PARTNERS

**Founding partnership, eight weeks.** One closed matter run through Kaia Legal in parallel with your reviewers, in your own tenant, with our frozen-set methodology applied to the result. Founding terms locked into year one. A go or no-go at week eight. FOUNDING PARTNERS
